

Poly & Pulp Converters (Pty) Ltd

COMPANY PROFILE

“Your one-stop food and retail packaging solution”

The mark of responsible forestry

B-BBEE Level 2

- Paper, plastic, labelling, and more
- Best quality and price, guaranteed
- Gold standard international certifications

ABOUT US

Our dedicated team has years of experience in food and retail packaging, and we go the extra mile to ensure your product stands out on the shelf. We are experts in packaging design, labelling legislation, regulatory compliance, material sourcing, material converting, and printing. Our commitment to service excellence is second to none.

Our state-of-the-art facility in Johannesburg is equipped to cut and slit PET film, die cut, fold and glue paperboard material, and transform paperboard material into a finished printed and varnished product. This enables us to make everything from retail folding cartons, display cartons and shippers through to shelf talkers (wobblers), cake boxes, window boxes, and more.

We are extremely proud of our 'gold standard' international certifications:

1. Our FSSC 22000 certification underlines our commitment to delivering food-safe packaging of the highest quality to our customers. Our employees are aware of their responsibilities to ensure that our product exceeds your expectations while also complying with all relevant legislative and food safety requirements.
2. Our Forest Stewardship Council® (FSC® C200379) COC Management System certification gives you a credible assurance that your packaging originates from well-managed forests, controlled sources, reclaimed materials, or a mixture of these. FSC® certification represents the pinnacle of sustainable packaging.

WHAT SETS US APART

25+ years' experience
Full-service offering
Specialists in food and retail packaging
FSSC 22000 certified for food safety

+ Quality and accountability guaranteed
+ Poly (plastics) and pulp (paper)
+ Ambient, refrigerated, and frozen
+ FSC® certified for sustainability

VALUE PROPOSITION

PACKAGING: ALL IN A DAY'S WORK

At Poly & Pulp, we produce a wide range of packaging for some of the world's most recognisable brands. We use renewable, recycled, and recyclable materials to create innovative retail and food service packaging solutions.

We're as committed to our customers and employees as we are to protecting the environment. And we have the necessary experience and certifications to back our claims.

OUR SERVICES

DREAM IT

Simply tell us what you desire, and leave the rest to us. We'll provide you with designs, material specifications and mock-ups, fine-tuning everything until you're 100% happy.

PRINT IT

Our expert team will make your dreams a reality. We print and produce your product packaging with utmost attention to detail.

FINISH IT

This is where your three-dimensional product takes shape, as we die cut, fold, and glue it. It's then packaged (bundled, shrink-wrapped, or palletised) and labelled for identification.

STORE IT

Our full-service offering includes warehousing and distribution. You tell us when, where, and how you want us to deliver your order.

TRUST IT

We pride ourselves on producing superior products, every time. We perform a raft of quality tests on all finished products – but please let us know if anything does not meet your expectations.

CONVERT IT

As an experienced paper and plastic converter, we simplify the supply chain by skilfully converting raw materials into packaging materials.

OUR PROCESS

Who we work with

We develop and produce packaging materials for the retail product market. Our clients include brand owners, product manufacturers, and importers. We specialise in food packaging.

Your brief

You present your packaging requirements based on the brand identity and performance expectations. We use our vast expertise to develop and produce packaging that will protect the product, perform well during the packing process, and meet your brand identity demands on shelf.

Fit, form, and function

We start by designing the shape and size of the primary, tertiary, and secondary packaging. The packaging must not only be fit for purpose but also be economically produced, aesthetically pleasing, and regulatorily compliant.

Product information and specs

We guide you through the development and drafting of product and packaging specifications, ensuring front-of-pack and back-of-pack information layouts meet regulatory compliance standards.

Production process

We draw on our experience to recommend the most suitable materials and production processes. Our factory is FSSC 22000 certified, allowing us to print and produce food-safe packaging. What's more, being FSC® certified means we can print and produce packaging from sustainable materials.

6

Printing

Our state-of-the-art equipment is geared to print everything from small quantity bespoke packaging to large volume retail packaging. All food packaging is printed with food-safe inks and sealed with food-safe varnishes.

7

Production and finishing

Now it's time to build your three-dimensional product. For cardboard packaging this may involve die-cutting, folding, and gluing to create folding boxes or cartons. For plastic packaging this might mean slitting and cutting plastic to create a sheet, strip, or window.

8

Quality control

We perform a variety of checks (visual inspection, dimensional measurement, analytical, and functional tests) to verify the integrity and performance of the packaging throughout the procurement, production, and assembly phases. Any defects or deviations are identified and addressed to maintain product quality and safety.

9

Packaging and distribution

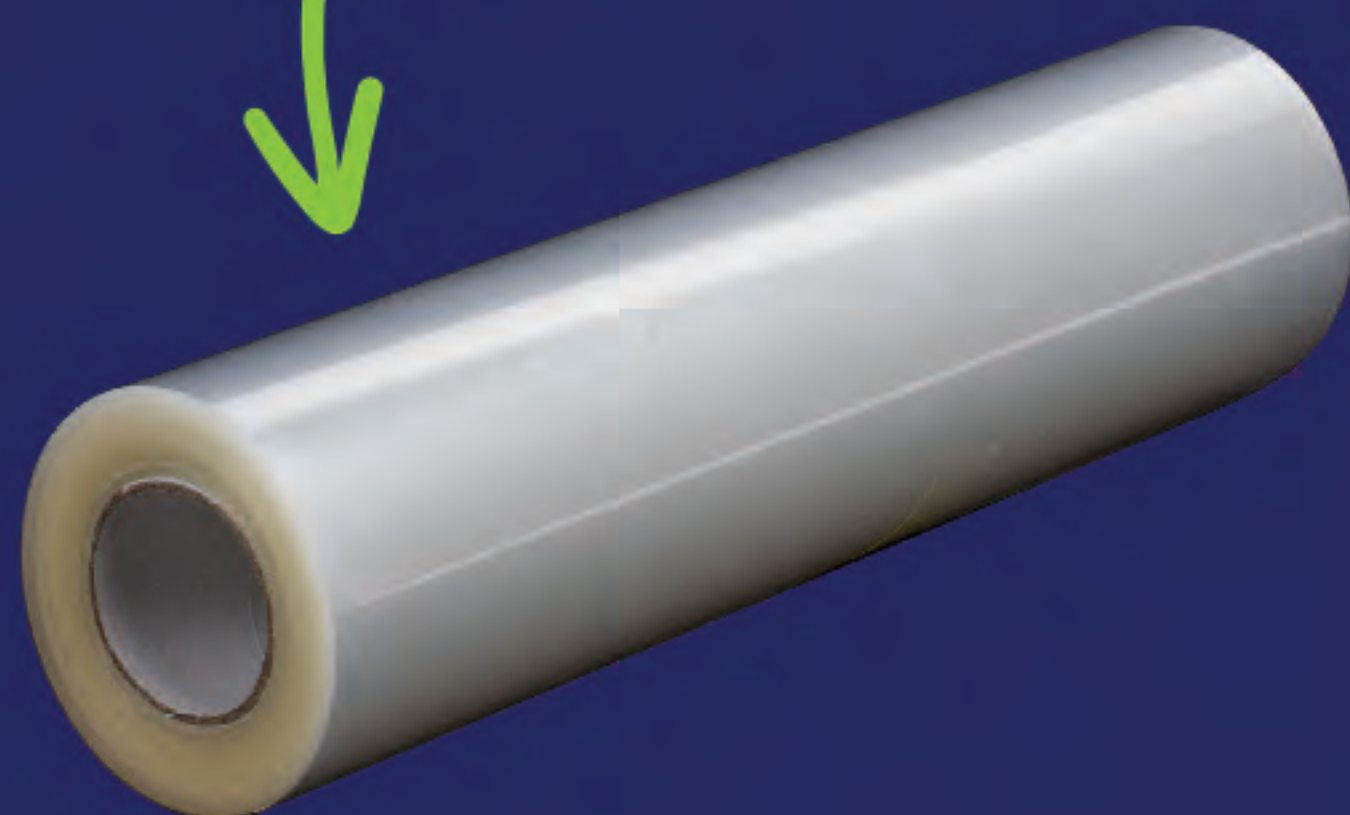

The last phase in completing the packaging is to finalise all aspects of quality control checks before securely packing your order into identifiable corrugated boxes ready for storage or distribution. Depending on your requirements, delivery notes, certificates of compliance (COCs) and invoices accompany each delivery.

OUR PRODUCTS

Clear BOPET plastic
cutting and conversion

Packaging windows

Cake strips
